

Review:

① Find your code from last year
you can focus on your final project submission.
Go through it and work out how it all worked.

② Find your validation functions, you can re-use/modify for this year.

* use of collections (dictionaries or lists).

What to look for:

* variables that have been declared and then used/changed in the program.

(how many different variable names did you use?)

what data types are they?

* use of conditions → if ... :
else:

(how many times did you use conditions in your program)?

* use of loops

how many loops did you make?
why use them?

how do you control a loop.

* how did you get input from the user?
